& HUMAN DEVELOPMENT

CHANGING MINDS

Why are we making changes to the current standards? Are we just pushing the TEKS down one grade level?

When will the new changes be officially implemented? Are all grade levels affected?

How will we help students make the change while still keeping STAAR scores up?

How do we move forward?

Where is the time to teach financial TEKS?

How do we get students to do more of the problem solving instead of the teachers?

SMU.

CHANGING MINDS

Is the drawing accurate?

Does the artist's drawing show a clear understanding of the speaker's description?

"...teachers need to pay attention to the incomplete understandings, the false beliefs, and the naïve renditions of concepts that learners bring with them to a given subject...If students' ideas and initial beliefs are ignored, the understandings that they develop can be very different from what the teacher intends." (Bransford et al., 2000)

CHANGING MINDS

8.3(A)

The student is expected to generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.

gen·er·al·ize  *verb* \ˈjɛn-rə-,līz, ˈjɛ-nə-\

: to make a general statement or form a general opinion;
especially : to state an opinion about a larger group that is based on a smaller number of people or things within that group

: to apply (something specific, such as a theory or rule) to larger group

CHANGING MINDS

Connecting Cognitive Science to Mathematical Proficiency

Cognitive Science

- **Learning with Understanding**
 - Improves retention
 - Facilitates learning related material
- **Usable knowledge makes connections and shows evidence of transfer**
- **Expert knowledge is organized around “big ideas”**

Mathematical Proficiency

- **Conceptual Understanding**
 - The student is expected to create and use representations to organize, record, and communicate mathematical ideas. (6.1E, 7.1E, 8.1E)
 - The student is expected to analyze mathematical relationships to connect and communicate mathematical ideas. (6.1F, 7.1F, 8.1F)

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Conceptual Understanding

8.3(A)

The student is expected to generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.

Questions to consider:

- How can this idea be represented in multiple ways?
- Do students understand the purpose of each representation?
- What evidence determines students' comprehension of the models, symbols, or formulas related to the concept?
- What types of connections to other knowledge should students make?
- What content vocabulary do students need to understand?

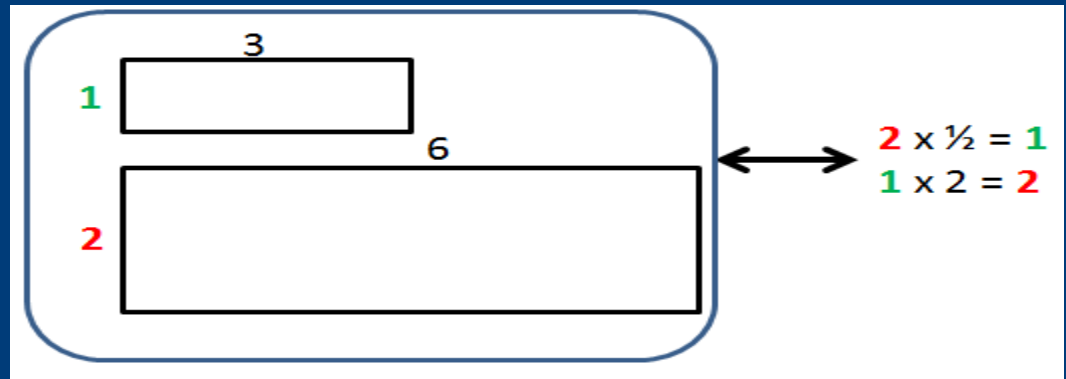

Big Idea: Representing, applying, and analyzing proportional relationships

Students extend their understanding of proportionality to include representations on a coordinate plane and applications, including slopes of lines. They contrast proportional relationships with relationships that are not proportional.

Vocabulary

Representations and Symbols

Connecting Cognitive Science to Mathematical Proficiency

Cognitive Science

- **Learning with Understanding**
 - Promotes fluency

Mathematical Proficiency

- **Procedural Fluency**
 - The student is expected to select...techniques, including mental math, estimation, and number sense as appropriate to solve problems. (6.1C, 7.1C, 8.1C)

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Procedural Fluency

8.3(A)

The student is expected to generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.

- Identifying the type of change (*how the change will take place*) on a coordinate plane
- Correctly reading ordered pairs in all four quadrants of the coordinate plane

Image retrieved from

<http://www.ck12.org/user:YWtlZWxlckBhY2VsZnJlc25vLm9yZWw./book/ACEI-Geometry-2012-2013/r2/section/6.3/>

Questions to consider:

- Which procedures, algorithms, and computational skills should students be able to use efficiently?
- Which concepts encourage students to estimate and/or determine a reasonable solution?
- Which mental strategies will be most efficient for students when studying this topic?
- Which mathematical properties should students be able to use?
- What computational errors do students commonly make when studying these concepts?

- Multiplication of rational numbers
- Determining equivalence of ratios
- Representing corresponding sides as a ratio

Big Idea: Representing, applying, and analyzing proportional relationships

Students extend their understanding of proportionality to include representations on a coordinate plane and applications, including slopes of lines. They contrast proportional relationships with relationships that are not proportional.

Connecting Cognitive Science to Mathematical Proficiency

Cognitive Science

- **Metacognition**

- “Experts have not only acquired knowledge, but are also good at retrieving knowledge that is relevant to a particular task.” (Bransford et al., 2000)

Mathematical Proficiency

- **Strategic Competence**

- The student is expected to select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate... (6.1C, 7.1C, 8.1C)
- The student is expected to use a problem solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process. (6.1B, 7.1B, 8.1B)

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Strategic Competence

8.3(A)

The student is expected to generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.

Questions to consider:

- Will students be able to identify the problem in a variety of situations?
- What problem situations can the teacher use which will require students to access prior knowledge?
- Is the student able to construct and use an appropriate “problem model”?
- What strategies should students use to solve problems related to these ideas?
- What should it look like when students express this idea mathematically?
- Which representations can be used to help students develop mental models of a problem situation?

The coordinates of four right triangles are given below. Which two of the four right triangles are similar? Justify your answer.

Triangle 1:	A (1,2)	B (1,1)	C (3,1)
Triangle 2:	A (1,9)	B (1,1)	C (13,1)
Triangle 3:	A (1,3)	B (1,1)	C (4,1)
Triangle 4:	A (1,6)	B (1,1)	C (9,1)

Big Idea: Representing, applying, and analyzing proportional relationships

Students extend their understanding of proportionality to include representations on a coordinate plane and applications, including slopes of lines. They contrast proportional relationships with relationships that are not proportional.

$$\frac{1}{2}, \frac{2}{3}, \frac{5}{8}, \frac{8}{12} = \frac{1}{2}, \frac{2}{3}, \frac{5}{8}, \frac{2}{3}$$

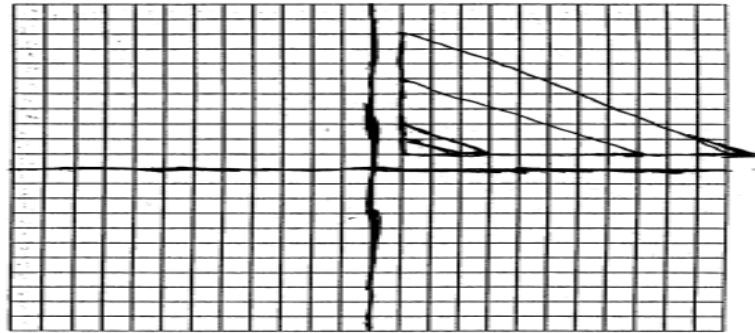

Triangles 2 and 3 are similar.

After drawing all the triangles on the chart,

I made a fraction by putting the height as the numerator, and the length as the denominator. I reduced the only fraction that could be reduced and it was equal to another fraction, indicating that they have proportional sides.

The coordinates of four right triangles are given below. Which two of the four right triangles are similar? Justify your answer.

- | | | |
|---------------------|---------|----------|
| Triangle 1: A (1,2) | B (1,1) | C (3,1) |
| Triangle 2: A (1,9) | B (1,1) | C (13,1) |
| Triangle 3: A (1,3) | B (1,1) | C (4,1) |
| Triangle 4: A (1,6) | B (1,1) | C (9,1) |

CHANGING MINDS

The coordinates of four right triangles are given below. Which two of the four right triangles are similar? Justify your answer.

- Triangle 1: A (1,2) B (1,1) C (3,1)
 Triangle 2: A (1,9) B (1,1) C (13,1)
 Triangle 3: A (1,3) B (1,1) C (4,1)
 Triangle 4: A (1,6) B (1,1) C (9,1)

$\Delta 1 \text{ } \Delta 2$ - no common scale

$\Delta 1$ $\frac{2}{2} \neq \frac{8}{12}$ $\Delta 2$
 $\frac{2}{2} \times 6 = 12$
 $\frac{8}{8} \times 4 = 32$
 $\frac{10}{10} \times 4 = 40$

I figured out that triangles two and three were similar by comparing the dimensions and seeing if they could multiply or divide into each other. Triangle 2's dimensions were 8 by 12, and triangle 3's dimensions were 2 by 3. Both dimensions ~~are~~ could either be multiplied or divided by four. They can be scaled, so they are similar.

$\Delta 1$ $\frac{2}{2} \neq \frac{2}{3}$ no!
 $\frac{2}{2} \times 3 = 6$

$\Delta 1$ $\frac{2}{2} \neq \frac{5}{8}$ no!
 $\frac{2}{2} \times 4 = 8$

$\Delta 2$ $\frac{8}{12} \neq \frac{5}{8}$ no!
 $\frac{8}{8} \times 3 = 24$
 $\frac{12}{12} \times 4 = 48$

$\Delta 3$ $\frac{2}{3} \neq \frac{5}{8}$ no!
 $\frac{2}{2} \times 3 = 6$
 $\frac{3}{3} \times 4 = 12$

SMU

ANNETTE CALDWELL SIMMONS
 SCHOOL OF EDUCATION
 & HUMAN DEVELOPMENT

CHANGING MINDS

Strategic Competence (cont.)

- Representing corresponding sides as a ratio in multiple ways

$$DE/DF = AB/AC$$

- Strategies for finding ratio or determining similarity:
 - Compare side lengths (free standing shapes or on coordinate plane)
 - Examine relationship between ordered pairs
 - Examine slope of line segments
 - Given the perimeter of two similar shapes, can students find the scale factor / scaling ratio?
- Identify corresponding sides and scale factors when given angle measurements
- Make a table to show proportional relationships

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Rethinking Problem Solving

- “A board was sawed into two pieces. One piece was two-thirds as long as the whole board and was exceeded in length by the second piece by four feet. How long was the board before it was cut?”

(Bransford et al., 2000)

SMU.

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Connecting Cognitive Science to Mathematical Proficiency

Cognitive Science

- **Metacognition**
 - Ability to monitor one's own understanding

Mathematical Proficiency

- **Adaptive Reasoning**
 - The student is expected to display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication. (6.1G, 7.1G, 8.1G)
 - The student is expected to use a problem solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process. (6.1B, 7.1B, 8.1B)
 - The student is expected to communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate. (6.1D, 7.1D, 8.1D)

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Adaptive Reasoning

8.3(A)

The student is expected to generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.

Questions to consider:

- Are students able to justify answers logically and with mathematical reasoning?
- Are students able to explain their thinking beyond the arithmetic and computation?
- Does student work demonstrate a strong knowledge base?
- Is the task understandable?

Big Idea: Representing, applying, and analyzing proportional relationships

Students extend their understanding of proportionality to include representations on a coordinate plane and applications, including slopes of lines. They contrast proportional relationships with relationships that are not proportional.

The coordinates of four right triangles are given below. Which two of the four right triangles are similar? Justify your answer.

Triangle 1:	A (1,2)	B (1,1)	C (3,1)
Triangle 2:	A (1,9)	B (1,1)	C (13,1)
Triangle 3:	A (1,3)	B (1,1)	C (4,1)
Triangle 4:	A (1,6)	B (1,1)	C (9,1)

Retrieved from http://www.escweb.net/tx_bm/math/docs/questions/P77.6D0E1.DOC

- Why are these triangles similar?
- How could you determine similarity without plotting each ordered pair on a coordinate plane?
- How would you describe the transformational relationship between each triangle?

Connecting Cognitive Science to Mathematical Proficiency

Cognitive Science

- **Learning Influenced By Motivation**
- **Fixed vs. Malleable Intelligence**

Mathematical Proficiency

- **Productive Disposition**
 - The student is expected to apply mathematics to problems arising in everyday life, society and the workplace. (6.1A, 7.1A, 8.1A)

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Productive Disposition

8.3(A)

The student is expected to generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.

Questions to consider:

- What type of instructional opportunities will encourage students to “make sense” of the mathematics being taught?
- Which teacher behaviors can positively influence students’ attitudes about math?

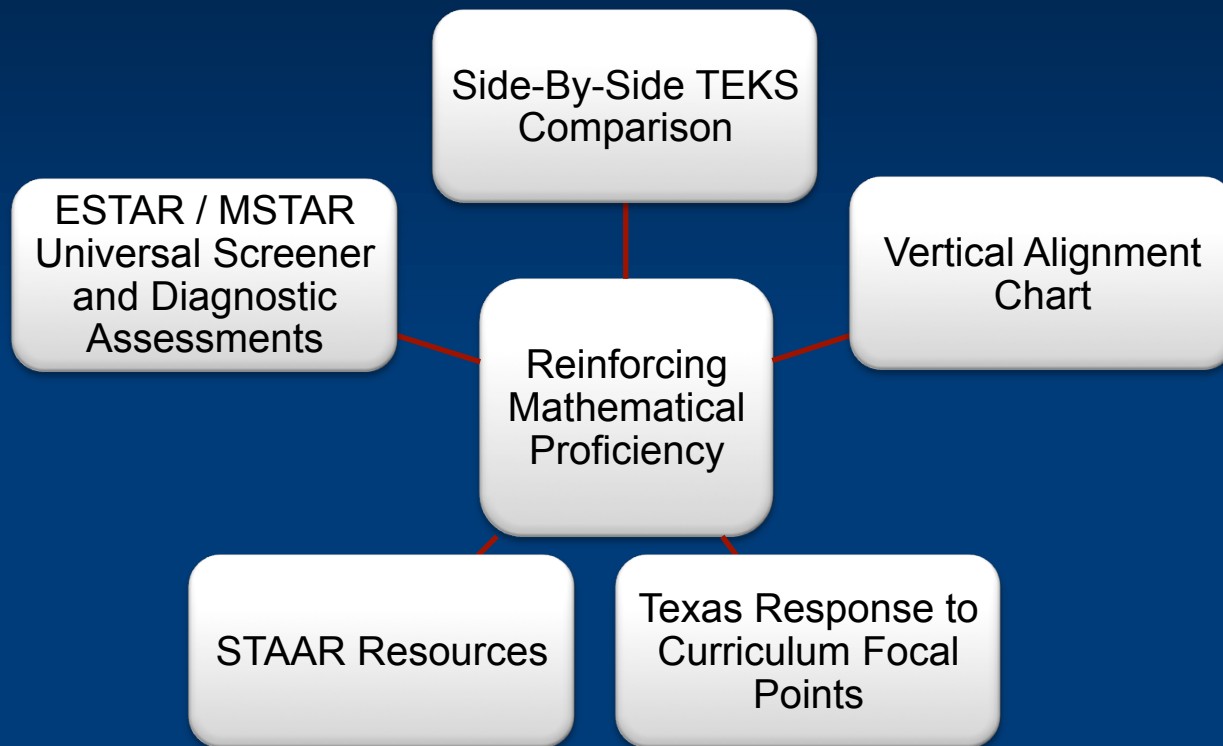

Big Idea: Representing, applying, and analyzing proportional relationships
Students extend their understanding of proportionality to include representations on a coordinate plane and applications, including slopes of lines. They contrast proportional relationships with relationships that are not proportional.

Rethinking Classroom Structure and Environment

- Organization
- Classroom Discussions
- Diagnostic Interviews
- Surveys and Observations
- Teacher Disposition towards instructional activities
- STEM projects which allow students to see the relevance of mathematics

“Although students appear to think mathematics is useful for everyday problems or important to society in general, it is not clear that they think it is important for them as individuals to learn a lot of mathematics” (Kilpatrick, Swafford, Findell, 2001)

Moving from Research to Practice

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Group Activity - Scenario 1

Part 1 -The sixth grade teachers want to use the Order of Operations Puzzle as independent practice after teaching 6.7(A): *The student is expected to generate equivalent numerical expressions using order of operations, including whole number exponents and prime factorization.*

- Identify the instructional strengths and weaknesses of this activity as it relates to the standard
- Using the Mathematical Proficiency Planning Template, modify the activity with strategies that address each of the mathematical proficiency strands

Part 2

- How will you explain your reasoning when discussing your observations with your colleagues?
- What additional questions might you have for the sixth grade team?

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Name _____ Date _____

Order of Operation Puzzle

For every answer more than one equation is correct.

Find equations.

$5 \times 5 + 1 - 14 \div 2 =$	19
$4 \div 2 \times 8 + 3 =$	
$5 + 7 \times 2 - 1 \times 2 =$	
$7 \times 3 + 8 \times 1 - 0 =$	

$7 + 7 \times 2 + 4 =$	25
$25 - 12 - 12 + 4 =$	
$8 \times 2 + 9 \div 3 - 2 =$	
$5 \times 5 \times 5 \div 5 =$	

$18 + 14 - 18 + 2 =$	14
$4 + 2 \times 2 + 2 =$	
$6 \times 2 - 10 + 12 =$	
$4 \times 4 - 4 + 2 =$

Scenario 1 Activity: Order of Operations Handout

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

• Order of Operations Puzzle •

Strengths

- practice procedures
- could be extended
 - ↳ Choose one number sentence + write a story
- have to be able to know order of operations before they can apply #.

Weaknesses

- basic level
- no application
- could be guess ~~work~~ (just circle an answer, no work)

Conceptual understanding : Students need to know order of operations vocab + meaning of $+$, $-$, \times , \div

procedural fluency : meets the evaluation: can you use order of operations?

Strategic Competence : How could you ~~what~~ create a word problem using these number sentences?

adaptive reasoning : Why does it equal the #? Why does it not?
*Justify your answer

productive disposition : financial literacy TEKS!
↳ apply operations

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

Strengths

- * Open ended
apply what they know
- * Conceptual understanding
- * Procedural Fluency
- * Diagnostic.

Weakness

- * Leaves out exponents
& prime factors
- * Not developmental

Record trials +
thought process

Student generate

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

Scenario I

- Strengths:
 - Multiple equations
 - Multiple problems for one result
- Weakness:
 - No parenthesis (grouping symbols)
 - No exponents
 - No real-world connection
 - Not generating expressions
- Improvements:
 - Create word prob's
 - Change operations to arrive at the result

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

SCENARIO #1 - Evaluating Instructional Resources

PART 1

Instructional Pros/Con's AS RE: 6.7a

<u>PRO'S</u>	<u>CON'S</u>
- Practice	- Demotivational (We want to sleep)
	- Does not "Generate"
	- Exponents?
	- Prime Factorization?
	- Directions Unspecific

PART 2

• Maybe we can just use the answers and let the students generate the equation with tiles?

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

Scenario 1: Evaluating Instructional Resources

Strengths:

- multiple ways to arrive at same answer
- requires practice (12 equations to solve)

Weaknesses:

- no parantheses or exponents
- cannot determine processing errors

Modifications: add () + exponents

Adaptive \Rightarrow justify correct solutions and explain incorrect

Strategic \Rightarrow identify first step toward solution

Enrichment
Is it possible to add parantheses to the incorrect expressions to make them correct?

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

Strengths

- Engaging Activity
- Different ^{combinations} ~~representations~~ result in same answer

Weaknesses

- Does not require ⑤ to generate
- Missing exponents, parentheses, & prime factorization

Modifications

- 1) Generate further combinations on their own to match answer
- 2) Consolidate multiplication by same factor into exponent or prime factorize

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

Strengths

More than one possible answer

Deals with the areas students struggle

M, D, A, S

Weaknesses

Students are not generating anything

Does not fit TEKS

What Would We Change?

Students create their own

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

FOCAL POINT: Using expressions, equations to represent relationships in a variety of contexts.

Students use mathematical symbols to represent linear relationships and formulas

STRAND: Expressions, Equations, & Relationships

REPORTING CATEGORY: Numerical Representations and Relationships

Student Expectation:

The student is expected to generate equivalent numerical expressions using order of operations, including whole number exponents and prime factorization

STRANDS OF MATHEMATICAL PROFICIENCY

Conceptual Understanding

Connections between equivalent equations

vocabulary:
prime factorization

Procedural Fluency

all operations including exponents & grouping

Strategic Competence

multiple representation multiple situations, & using order of opn should be added

Adaptive Reasoning

Productive Disposition

SMU

ANNETTE CALDWELL SIMMONS
SCHOOL OF EDUCATION
& HUMAN DEVELOPMENT

CHANGING MINDS

Results from Scenario 1

Strengths & Weaknesses

- ✓ addresses the foundation of procedural fluency
- not generating anything

Conceptual Understanding

- real life scenarios
- money, fair, procedural steps (cooking)

Procedural Fluency

- take away one "piece"
- numbers, symbols, or use same # card building activity

Strategic Competence

- multiple ways to same answer - cards
- write your own word problem using order of operations string

adaptive reasoning

- inequality & justify why

productive disposition

- starting w/ non mathematical representation as a foundation

Heidi Miller
